

# **Set-down box**

## **Abstract**

The present invention relates to a set-down box of a labelling machine, including: a conveyor means used to place the labels over the articles to be labelled; a vertically displaceable pressing means used to press the labels on the articles to be labelled; a means used to vertically displace the pressing means; a motor with clockwise and anti-clockwise rotation; and a driving means transmitting the driving power of the motor to the conveyor means and to the means used to vertically displace the pressing means; wherein the means used to vertically displace the pressing means has a free-wheel in one direction of rotation of the motor.
